

MANUFACTURERS OF INDUSTRIAL HEAT TREATING FURNACES & OVENS

Custom Window Systems, Inc. (CWS), a manufacturer of high quality window and door products, has added a Lucifer Red Devil Furnace to its tool room.

Paul Mathewson of CWS said, "We bought the Lucifer Furnace for several reasons: reasonable cost, good reputation and made in the USA. In addition, the sales and factory reps were very helpful in obtaining the correct size and options for our application - heat treating punches and dies for our manufacturing equipment."

This RD7-KHE18 bench model provides a work chamber area of 12" H x 14" W x 18" L and heats to 2,200°F with 6 kW power. Standard features include a Honeywell digital time proportioning temperature controller, 4-1/2" of firebrick and mineral wool insulation, a ceramic hearth plate to protect the floor brick, and a horizontal swing door with a cam lock for a tight seal as well as an automatic power shut off safety switch. Easy-to-replace side wall heating elements are designed with long lasting heavy gauge wire coils in radiant panels.
